NEW FLAGSHIP ANALOG INTERCONNECTS

BALANCED

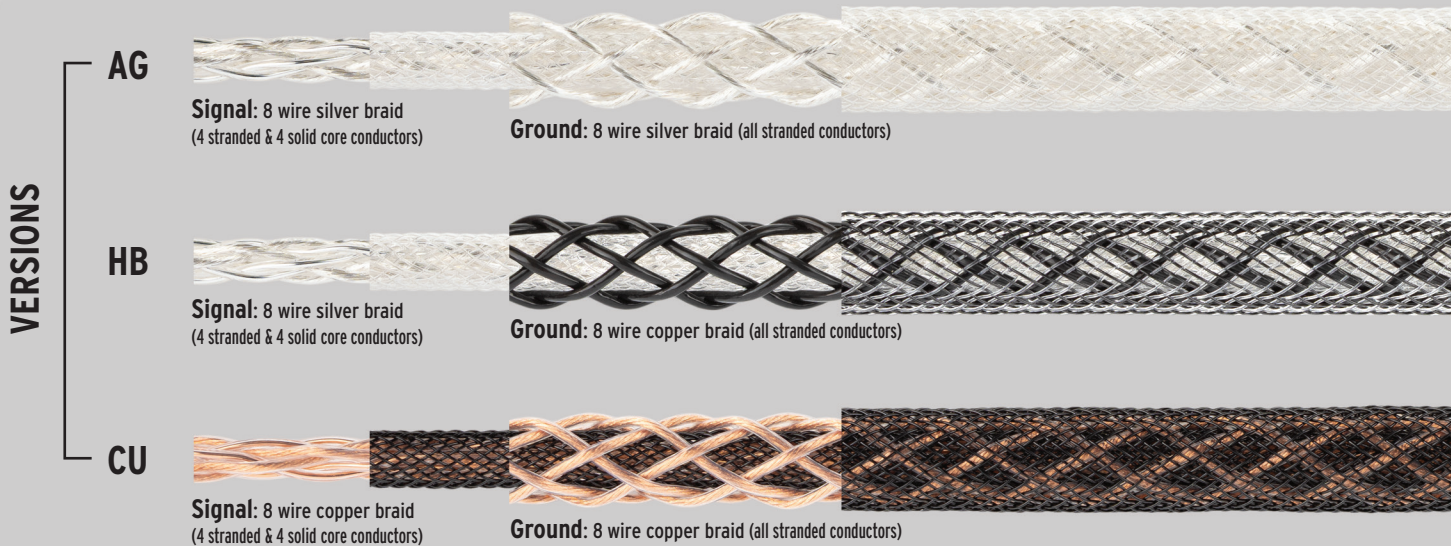

SINGLE ENDED

The Neo analog interconnect represents the pinnacle of refinement in Kimber Kable's lineage, synthesizing the most exemplary elements from all preceding designs into a singular, elevated expression.

Neo delivers the complete, unaltered truth of the sound itself. It surpasses every preceding cable in performance and musical fidelity.

Dual-Layer Braided Construction

The 8 wire braided signal conductors (4 solid core & 4 stranded) are at the heart of this cable, running through the center. The ground is comprised of 8 stranded conductors which are braided around the center signal. This geometry allows the signal to travel with great accuracy while the ground conductors act as a passive shield.
