

Vento 50

- 3-way bass reflex system
- 200 watts
- Titanium-graphite technology
- Magnetic fabric grill

The modern look of the new Vento

We've redesigned the look and technology of our Vento premium speaker series. Thanks to the modern design, with discreetly curved side panels, rounded cabinet edges and high-quality surfaces with a perfect finish, the new Vento speakers have a very self-assured appearance. The harmoniously proportioned premium speakers offer a perfect balance between timeless elegance and powerful performance. This allows the Vento models to be used universally - they are an enrichment for the most diverse living spaces. At the centre of the acoustic action is our new Vento 50 centre speaker, which sets the tone for your home cinema with its magnificent features, both visually and technically. The stately 3-way centre offers immense dynamics as well as ideally balanced tuning. With its clear and precise voice reproduction, it presents dialogue sharply delineated. The Vento 50 centre also scores with powerful bass, detailed treble and the finest workmanship.

Titanium Graphite - high-quality technology

The Vento 50 centre speaker relies on the outstanding technical properties of our newly developed drivers with titanium graphite diaphragms, which are distinguished by their understated elegance due to the matt shimmer of the diaphragms. The drivers nestle seamlessly into the high-gloss lacquered baffles without any visible screw connections. The latest generation of wave surrounds, capable of particularly large excursions, ensure the deepest, cleanest bass and a high power handling capacity. The new driver technology is based on the previous titanium drivers: their surface is treated in a complex chemical process and brought to a new level acoustically. The aim was to minimise or completely eliminate the partial vibrations that damage the sound. With less weight, the new titanium graphite chassis are stiffer and have better damping. In addition, the new drivers work as perfect piston transducers and thus offer ideal conditions for reproducing acoustic signals one-to-one, without losses.

Noble enclosures for the best sound

The new cabinets not only look superb, they also have to meet our high technical requirements. The revised design ensures that there is more interior volume available to tune the speakers with more bandwidth in the low frequency range. This gives the new Vento speakers an even more contoured and clean sound. On the other hand, the revised cabinet radii and the new basic shape ensure less sound interference from the cabinet itself. With a variety of cabinet finishes available, the modern and timelessly elegant Vento loudspeaker models

CANTON

feel at home in many interior design styles. At the same time, the cabinets of the new Ventos meet the highest standards of workmanship and touch quality. The premium speakers are available in white and black "high gloss" lacquers. The perfect surface finish of the multi-layered lacquered Vento models makes the speakers look particularly elegant and refined.

Eyes on the details

The speaker terminals in the new Ventos have been redesigned both visually and technically to ensure maximum conductivity. The solid screw terminals, in single or bi-wiring design depending on the Vento model, hold cable cross-sections of up to 10 mm² and offer the option of accommodating speaker cables with banana plugs or fork bridges. The upgraded terminals have a special high-quality and conductive material, with new terminals and a finer thread. As a result, we also achieve reference-worthy contacting in the Vento series for perfect sound development and long-term stable contact to connected amplifiers. The innovations of the Vento series continue with the high-quality fabric covers. If necessary, they conceal a direct view of the technology and hold onto the baffles with powerful magnets. The straight panels at the top and discreetly curved panels at the bottom provide an unobtrusive, calm appearance. Thanks to the flat design, the acoustically neutral fabric panels nestle harmoniously on the baffles. All our Vento speakers are equipped with inconspicuous black fabric covers that do not affect the sound of the premium speakers.

Well selected technology

The Vento 50 centre speaker has a multi-layer laminate enclosure that is constructed in many individual steps and has multiple bracing on the inside. This makes the Vento 50 enclosure very solid and immune to resonances that would negatively affect the sound. Sophisticated damping of the cabinet and selected crossover components of the highest quality are further factors in the sound optimisation of the 3-way Vento 50 centre speaker. In the elegant centre speaker with its rear-vented bass reflex cabinet, one titanium-graphite

CANTON

woofer and one titanium-graphite midrange driver each in 174 mm format provide precise bass and clean midrange. Thanks to Wave Bead technology and the powerful drives of all drivers, the Vento 50 follows acoustic signals quickly and precisely. Our high-calibre 25 mm dome tweeter with aluminium oxide ceramic diaphragm turns the stately Vento 50 centre speaker into a broadband performer.

Type	Centerspeaker
Engineering Principle	3-way bass reflex
Nom. /Music power handling	120 / 200 watts
Frequency response	26...40.000 Hz
Crossover frequency	300 / 3.000 Hz
Woofer	1 x 174 mm (6,8"), Titanium-graphite (Wave surround)
Midrange	1 x 174 mm (6,8"), Titanium-graphite (Wave surround)
Tweeter	1 x 25 mm (1"), Ceramic
Warranty	5 Jahre
Nominal Impedance	4...8 ohms
Dimensions (WxHxD)	20,5 x 61 x 36,5 cm (8,1" x 24" x 14,4")
Weight	14,5 kg
Available accessories	Loudspeaker stand LS 860
Carton Content	Vento 50 Fabric grill (black) Manual
